

$f_n : X \rightarrow \overline{\mathbb{R}}$  measurable

$$A = \{x \in X \mid \lim f_n(x) \text{ exists in } \overline{\mathbb{R}}\}$$

Nontriv A measurable.

On a:  $\lim f_n(x)$  exists in  $\overline{\mathbb{R}}$  in  $\liminf f_n(x)$   
" "  
 $\limsup f_n(x)$

On a  $A = \{x \in X \mid \underbrace{\liminf f_n(x) - \limsup f_n(x)}_{g(x)} = 0\}$

$$A = g^{-1}(\{0\})$$

$\hookrightarrow$  borel

measurable?  $\rightsquigarrow A$  measurable

Attention aux  $x$  pour lesquels  $g^n(x)$  pas défini

$B = \{x \in X \mid g(x) \text{ not defined}\} \subset \text{measurable} \dots$

or  $A = \{x \in B \mid g(x) = 0\} = g^{-1}(\{0\})$   
 $g$  define sur  $B$

g or measurable car fitting in or lining up in  
some  $\beta$  some measurable
